

CDB3 Series Circuit Breakers

Scope of Application

CDB3 series circuit breakers are mainly applied to the AC 50Hz/60Hz circuit with rated voltage 230V or less and rated current up to 32A provide circuits of modern buildings with overload and short-circuit protections. The product can be widely used in family, hotel, apartment, hospital, industrial and mining enterprises as branch switch.

Construction Features

CDB3 series miniature circuit breaker has compact construction, in the width of 18mm, it has two poles(P+N), which is specially suitable for household and leakage current circuit breaker. The isolation case is installed with contact system, arc-extinguishing system, four-link rapid move framework and thermal-electromagnetic release, which is related to different trip current.
